

# ADVISORY ON ASIAN KOELS

Photo by David Tan.

**Male Asian Koels:** glossy blue-black plumage, crimson irises, long tail, pale green beak, and grey legs and feet.

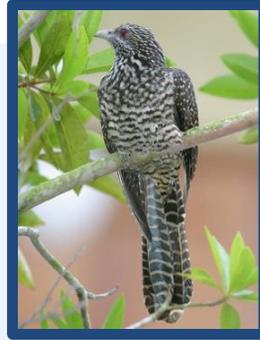

Photo by Tsang Kwok Choong.

**Female Asian Koels:** dark brown upperparts and light brown underparts; body is heavily spotted and streaked in white and rufous.

**What are they?** The Asian Koel (*Eudynamis scolopaceus*) is a large cuckoo bird. It is a brood parasite that lays its eggs in the nests of other birds, which will provide parental care until the young Koel is ready to fly. **In Singapore**, the host is predominantly the House Crow (*Corvus splendens*).

**Distribution & Habitat** Asian Koels are found in China, South Asia and Southeast Asia. **In Singapore**, it can be found in secondary forests, parks, and low-density urban areas, feeding mainly on fruits and berries.

**Behaviour** The Asian Koel is more often heard than seen, especially during its breeding season (roughly every 3 months throughout the year, following the house crow's breeding cycle). The Koel makes a variety of calls, including the distinctively loud, repetitive, high-pitched 'ku-oo' mating calls from dawn, and can sometimes be heard till night.

## Important Ecological Roles

**Control of the house crow population** The Asian Koel is a protected species under The Wild Animals and Birds Act. As a brood parasite, the Asian Koel deposits its eggs in the unattended nest of a house crow, sometimes removing one of the host's eggs in the process. The Koel chick hatches first and may force the host's eggs or chicks out of the nest. Therefore, Koel brood parasitism reduces the crow's reproduction success and keeps its population in check.

**Nest of koel and crow eggs**

**Koel eggs are slightly smaller!**

## What should you do if you are affected by the Asian Koels?

NParks is working with NEA and premise managements, to prune trees, and remove crows' nests and food sources to discourage Asian Koels from roosting in residential areas.

If you need any assistance, you can contact us at **1800-476-1600** or through our online feedback form at <https://www.avs.gov.sg/feedback>. Alternately, you can approach your town council or condominium management for assistance.

While there are Singaporeans who have been inconvenienced by calls of the Asian Koel, there are also others who enjoy the presence of such wildlife in our environment. We seek your understanding with regard to the management of the Asian Koel population.
