## Bukit Timah Nature Reserve Summit Challenge.

What have you seen?– Tick  the boxes when you have spotted the animal.

What is the most interesting thing you have seen? Draw it in the box below.

St Andrew's Cross Spider

Slender Squirrel

Greater Racket-tailed Drongo

Long-tailed Macaque

What have you learnt?– Try answering the following questions. You may find clues on the signs along your route.

1

What should you do if you encounter a snake in the reserve?

2

What are plants that grow on other plants for support called?

3

Which two organisms make up a lichen?

4

Why do some birds mimic others?

5

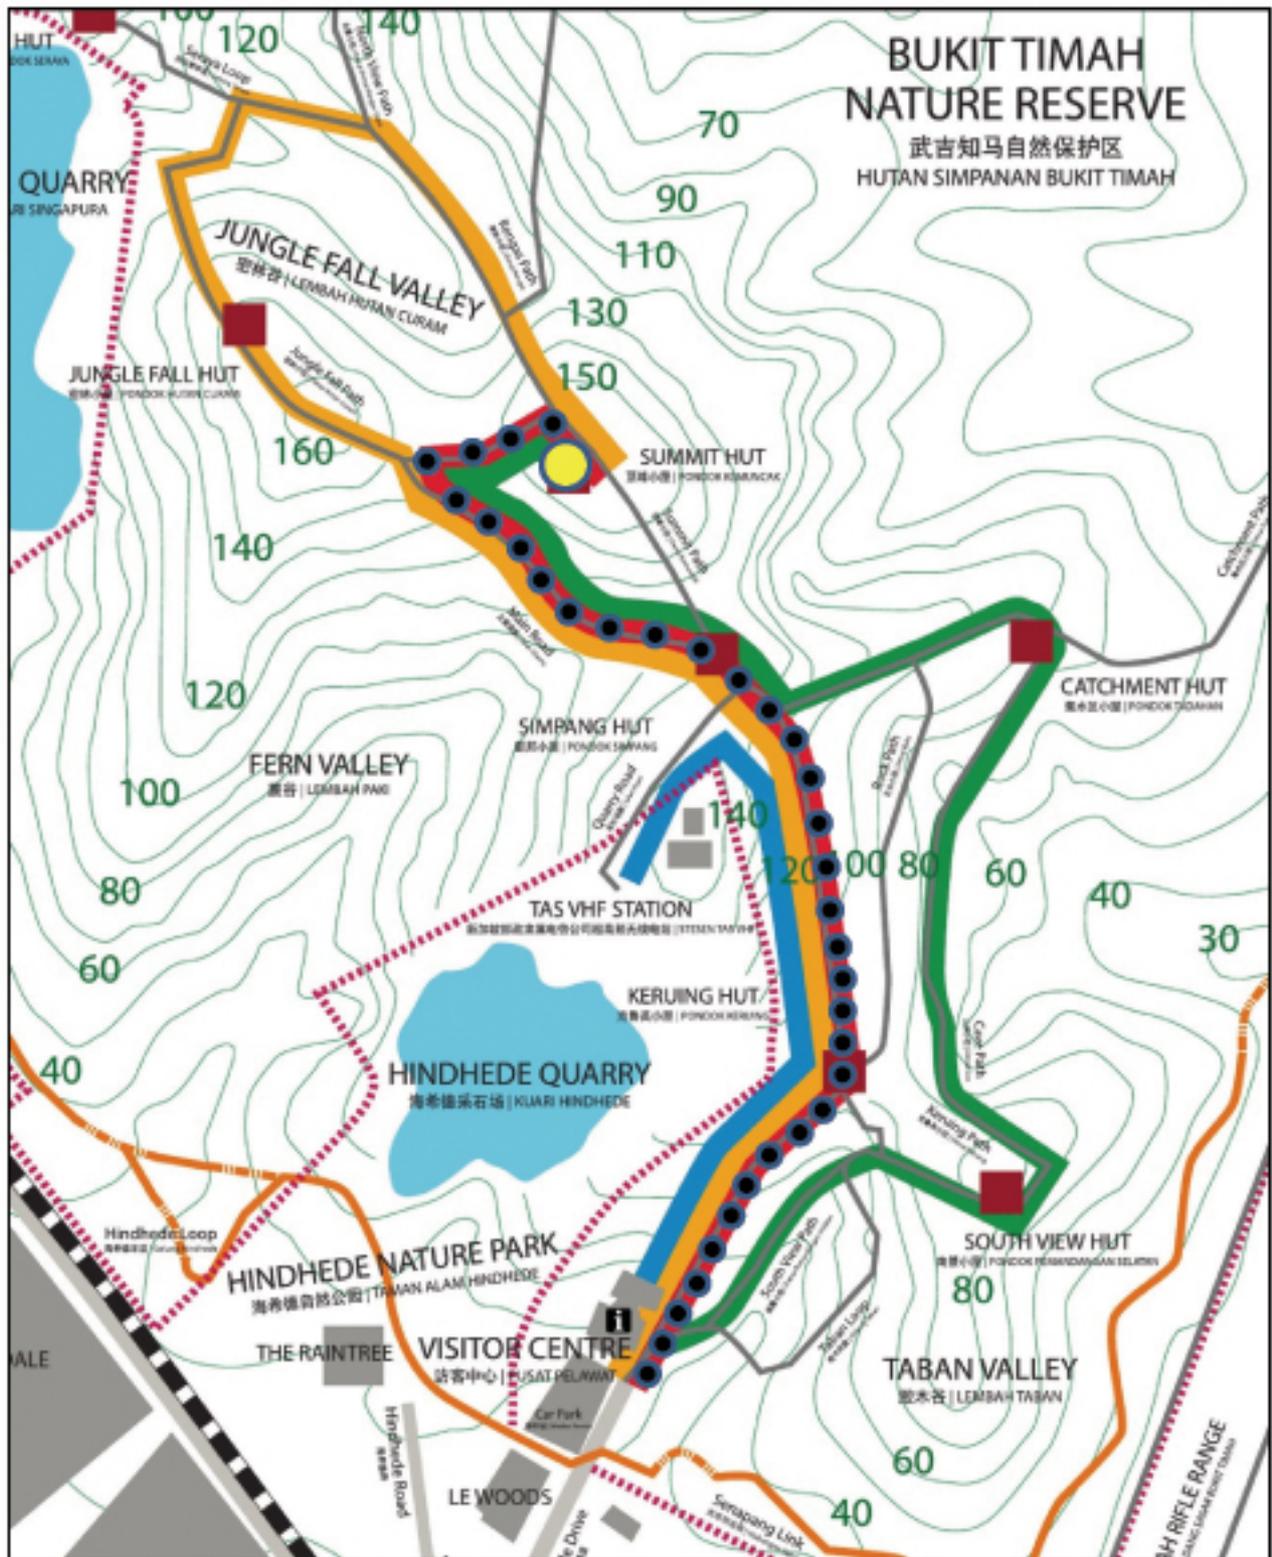

Which male insect produces a buzzing sound to attract females?

Did you know...?

- The St Andrew's Cross Spiders' legs are arranged in pairs to form an X-shape. The X is called the St. Andrew's Cross because it is believed that the saint suffered on a cross of this shape.
- The Greater Racket-tailed Drongo is often spotted following monkeys and squirrels, feeding on the insects they disturb.
- The Slender Squirrel is smaller than the Plantain Squirrel and its underside is grey.
- The Long-tailed Macaque helps in the dispersal of seeds by storing food in their cheek pouches and transporting it to another site for consumption. (Photo courtesy-Yanling)
