

Once upon a time, Singapore was mostly covered with jungles and swamps. As more people settled on the island, nature made way for roads and buildings to house the growing population.

To build a beautiful and special home, people started to transform Singapore into a Garden City. Green parks started to emerge. Fast-growing trees were planted to provide shade. Even flyovers and overhead bridges were covered in colourful flowers. These efforts made Singapore a place where people can live, work, and play in a garden environment that they helped create – a City in a Garden.

Even as we face climate change and become more urbanised, Singapore will continue to provide a more sustainable living environment as we transform into a City in Nature. We can look forward to fresher air, cleaner water, cooler temperatures, and better health and well-being. We do this by safeguarding our core nature reserves while creating more spaces for nature-based recreation, making our landscapes more natural, and strengthening the connectivity between our green spaces.

Everyone can play a part in making Singapore a greener home. In 2013, a special Every Child A Seed programme was started to give students a chance to grow their own plants from seeds. This year, as we commemorate 60 years of greening Singapore, we invite you to join us in transforming and caring for our City in Nature!

Plant Information

Did You Know?

The Sunflower is not really a flower. It is made up of many small flowers clustered together. The outer ring is made up of flowers with big yellow petals. The owers in the centre are important because they produce seeds.

Growth Rate

Sunflower seeds take 5 to 10 days to germinate. It takes around 90 days for flowers to grow.

Growth Conditions

- At least 4 hours of direct sunlight a day
- Seed to germination stage: ~ 250 ml once a day, water **slowly**

After leaves develop: water **slowly** till water drains out of the drainage holes

Did You Know?

The Roselle is a common home garden vegetable.

Almost every part of the plant, from the leaves to the red calyces* and the roots, is edible.

*Calyces - plural for calyx; the outer layer of the flower bud.

Growth Rate

Roselle seeds take 2 to 3 days to germinate. It takes around 20 to 30 days for flowers to grow.

Growth Conditions

- O At least 4 hours of direct sunlight a day
- Seed to germination stage: ~ 250 ml once a day, water **slowly**

After leaves develop: water **slowly** till water drains out of the drainage holes

Did You Know?

Sweet Basil is used in various cuisines such as Italian, Thai, Indonesian, Mediterranean and Vietnamese.

Growth Rate

Sweet Basil seeds take 3 to 5 days to germinate. It takes around 45 to 90 days for flowers to grow.

Harvest young basil leaves for optimal taste!

Growth Conditions

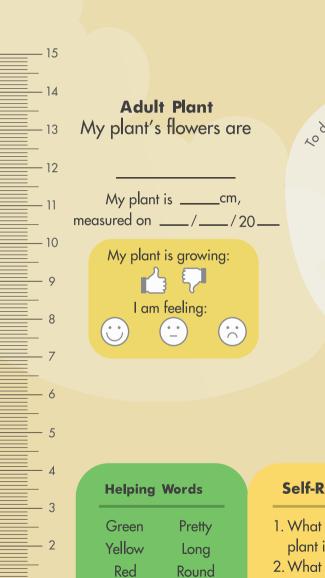

- At least 4 hours of direct sunlight a day
- Seed to germination stage: ~ 250 ml once a day, water **slowly**

After leaves develop: water **slowly** till water drains out of the drainage holes

My Plant Growth Chart

Now that you have planted your seeds, observe your plant's growth by drawing what they look like at different stages in the pot below. Using the ruler on the left, measure the height of your tallest plant.

Self-Reflection

- 1. What have I done to ensure my plant is growing well?
- 2. What might be the reason that my plant is not growing or has died?

Remember that plants are living things and do not always grow how we expect them to! You can try growing a new plant or observe the growth of your classmate's plant.

Share your reflections with us by scanning the QR code:

Tree Maze

The basic requirements of a healthy plant are light, water and air. Go around the maze and collect the essential items for a healthy plant while avoiding plant pests that can damage your plant.

I WANT TO DO MORE!

The important role you play in greening Singapore does not stop here. Here are some ways you can continue to play your part:

- Encourage your family and friends to grow plants at home or in their offices
- Join your school's Green Club or start your very own!
- Learn more about our environment by reading up on nature and spending time in our parks, gardens and nature reserves

Can you think of other ways where you can contribute to making Singapore a City in Nature? Share them with your classmates and teachers.
