

## **NOTICE OF SITE INVESTIGATION WORKS ALONG EAST COAST**

Dear Park and Beach Users,

The Housing & Development Board (HDB) has appointed Ryobi Geotechnique International Pte. Ltd to carry out site investigation works on land along East Coast Park for the proposed 'Long Island' project, from end September 2026 to 1Q 2027. As part of these works, a few soil investigation rigs will be temporarily stationed at various locations within the 'working boundary' shown in the map below.

The park and beach will remain open, and you can continue to enjoy your usual activities. For your safety, please keep clear of the temporarily hoarded work areas and follow on site safety advisories and signs. If you have any questions or feedback about the site investigation works, please contact:

|                                           |            |           |
|-------------------------------------------|------------|-----------|
| Ryobi Geotechnique International Pte. Ltd | Mr Bhalvin | 9720 5511 |
|-------------------------------------------|------------|-----------|

Thank you for your understanding.

### **ANNEX**

The site investigation works are part of the ongoing technical studies to inform the reclamation plans for the proposed 'Long Island' project, an integrated solution for coastal protection that will also bring multiple national benefits. The site investigation works will gather more information about the geological conditions around the area, which will guide the detailed design and planning for 'Long Island' reclamation works. These are site investigation works only and not part of the preparatory works for 'Long Island'. Public engagements will continue for the 'Long Island' project, and more details will be shared over the coming months.
